Abstract

Partners Connected Health develops and validates technology-based solutions aimed at facilitating collaborative care, self-management, and improved quality. From ideation to implementation, our team envisions and builds innovations that facilitate collaborative care, self-management, and improved quality. Current solutions often do not meet their goals of promoting self-care due to limited integration into the clinical workflow, and low sustainability of patient, provider, and caregiver engagement. The Partners Connected Health core mission is to define the future of technology-enabled care delivery by integrating real-world patient and provider perspectives with user-centered design principles to create clear paths toward innovation. This year, we are launching the Partners Connected Health innovation challenge (CHIC), a competition geared toward finding innovative, technology-based solutions that enable care (preventive care and chronic disease management) outside of the clinic.

Technology-based solution that enables preventive care and chronic disease management outside of the clinic.

Background and Introduction

Partners Connected Health develops and validates technology-based solutions aimed at facilitating collaborative care, self-management, and improved quality. From ideation to implementation, our team envisions and builds innovations that facilitate collaborative care, self-management, and improved quality.

We create tools and processes that facilitate the delivery of healthcare that is:
- Time and place independent
- Outside of traditional care settings
- Maintains both real-world implementation capabilities
- Our multi-disciplinary teams work with clinicians, consultants, and research professionals to demonstrate the value and potential of technology-enabled interventions via pilots and trials in real-world settings.

The Challenge

Current solutions often do not meet their goals of promoting self-care due to limited integration into the clinical workflow, and low sustainability of patient, provider, and caregiver engagement. The Partners Connected Health core mission is to define the future of technology-enabled care delivery by integrating real-world patient and provider perspectives with user-centered design principles to create clear paths toward innovation.

This year, we are launching the Partners Connected Health innovation challenge (CHIC), a competition geared toward finding innovative technology-based solutions that enable care (preventive care and chronic disease management) outside of the clinic.

The Award(s)/Prize(s)

Eight participants will be selected from the pool of applicants. From those eight selected winners, two semi-finalists will be invited to engage in a user-centered design consultation with staff at Partners Connected Health.
To select the grand prize winner, the two semifinalists will present their progress in early July 2016 to a panel of judges composed of leaders from Partners HealthCare and innovation experts at our Connected Health offices. The grand prize winner will be announced on or around July 21, 2016.
